

## Archivos .h (proyecto final)

### **bandit.h**

```
#ifndef BANDIT_H
#define BANDIT_H

#include "entity.h"

class Bandit : public Entity
{
public:
    Bandit(Entity* target); // Necesita saber a quién perseguir
    void update(double dt) override;

private:
    Entity* targetPlayer; // Referencia al jugador
    double speed;
};

#endif // BANDIT_H
```

### **entity.h**

```
#ifndef ENTITY_H
#define ENTITY_H

#include <QGraphicsPixmapItem>

class Entity : public QGraphicsPixmapItem
```

```

{
public:
    Entity(QGraphicsItem *parent = nullptr);

    // Métodos para manejar movimiento
    virtual void update(double dt); // Se llamará cada frame

    void setVelocity(double dx, double dy);
    double getVx() const { return vx; }
    double getVy() const { return vy; }

protected:
    double vx; // Velocidad en X
    double vy; // Velocidad en Y
};

#endif // ENTITY_H

```

## **game.h**

```

#ifndef GAME_H
#define GAME_H

#include <QObject>
#include <QGraphicsScene>
#include <QTimer>
#include "levelbase.h"

class Game : public QObject

```

```

{
    Q_OBJECT
public:
    explicit Game(QObject *parent = nullptr);
    QGraphicsScene* getScene() { return scene; }
    void start();

    // Método para cambiar de nivel
    void switchLevel(int levelId);

public slots:
    void gameLoop();

private:
    QGraphicsScene *scene;
    QTimer *timer;
    LevelBase *currentLevel;
};

#endif // GAME_H

```

## **gamewindow.h**

```

#ifndef GAMEWINDOW_H
#define GAMEWINDOW_H

#include <QMainWindow>
#include <QGraphicsView> // IMPORTANTE: Soluciona el error "incomplete type"

```

```
class Game; // Declaración adelantada de la clase Game
```

```
class GameWindow : public QMainWindow
```

```
{
```

```
    Q_OBJECT
```

```
public:
```

```
    GameWindow(QWidget *parent = nullptr);
```

```
    ~GameWindow();
```

```
private:
```

```
    // Estas son las variables que el compilador te dice que faltan:
```

```
    QGraphicsView *view;
```

```
    Game *game;
```

```
};
```

```
#endif // GAMEWINDOW_H
```

## **lander.h**

```
#ifndef LANDER_H
```

```
#define LANDER_H
```

```
#include "entity.h"
```

```
#include <QKeyEvent>
```

```
class Lander : public Entity
```

```
{
```

```
public:
```

```
